EDUCATION

National University of Computer & Emerging Sciences (FAST-NUCES)

Bachelor of Science in Software Engineering

Lahore, Pakistan

Aug. 2024 – Aug. 2028

PROJECTS

Cryptex – Crypto Trading Simulator | C++, Qt GUI, OOP, File Handling

- Developed a multi-window desktop application simulating cryptocurrency trading for BTC, ETH, and SOL with real-time price trend graphs and portfolio tracking
- Implemented a secure user authentication system with Login, Signup, and Admin Login using structured file-based credential storage
- Built an Admin Panel for user management, role assignment, account deletion, and report generation
- Engineered automatic Limit Buy/Sell order execution, trading history tracking, and profit/loss reporting
- Collaborated with a teammate using Git for version control, applying OOP principles with separate classes per window

Assembly Asphalt – Racing Game | x86 Assembly Language, NASM, Console Graphics

- Developed a console-based car racing game entirely in Assembly language with dynamic scrolling backgrounds and responsive keyboard controls
- Implemented collision detection, coin-based scoring, and a pause menu with resume, restart, and exit functionality
- Followed a phase-wise modular development approach with incremental verification, optimization, and thorough code commenting

Super Mario 2D Clone | C++, SFML, Procedural Programming, Game Physics

- Built a 2D Mario-inspired platformer from scratch in C++ using SFML for sprite rendering, texture management, and audio integration
- Implemented player mechanics (movement, running, jumping), bounding-box collision detection, and basic enemy AI movement patterns
- Designed a complete single-level experience with a scoring system, background music, sound effects, and a file-based leaderboard

Weather App | HTML, CSS, JavaScript, OpenWeatherMap API

- Built a real-time weather application fetching live data from the OpenWeatherMap API with animated glowing UI and smooth forecast scrolling
- Tested API error handling, edge cases, and ensured responsive and stable UI behavior across devices
- Deployed on GitHub Pages with responsive design and modern CSS animations

TECHNICAL SKILLS

Languages: C/C++, Python, JavaScript, HTML/CSS, x86 Assembly, SQL (Microsoft SQL Server)

Frameworks & Libraries: React, Qt (Widgets & Designer), SFML

Developer Tools: Git, GitHub, VS Code, Qt Creator, GitHub Pages

Concepts: Object-Oriented Programming, Data Structures, Agile Methodology, Game Development, REST APIs, Software Testing, Manual Testing, Debugging

CERTIFICATIONS

Google: Crash Course on Python (Nov. 2025)

DeepLearning.AI: AI For Everyone (Jun. 2025)

Microsoft: Introduction to Generative AI (May 2025)

Deloitte Australia: Technology, Data Analytics, and Cyber Job Simulations (Jan. 2026)

IBM: Introduction to Mobile App Development (Feb. 2025)

Cisco: Introduction to Data Science (Jun. 2025)

HP LIFE: Agile Project Management (Sep. 2025)

DigiSkills.pk: Freelancing (Oct. 2023) | Search Engine Optimization (Feb. 2024)

ACM Coding Competition | *FAST-NUCES, Lahore*

2025

- Participated in competitive programming contest organized by ACM chapter, solving algorithmic and data structure problems under time constraints
